Excluded – decide after reading

- [Multidisciplinary Digital Publishing Institute \(MDPI\)](#) – I decided not to include MDPI on the list itself. However, I would urge anyone that wants to publish with this publisher to thoroughly [read this wiki article](#) detailing their possible ethical/publishing problems, and [a recent article](#) discussing their growth.

Original description by J. Beall

This is a list of questionable, scholarly open-access publishers. We recommend that scholars read the available reviews, assessments and descriptions provided here, and then decide for themselves whether they want to submit articles, serve as editors or on editorial boards. In a few cases, non-open access publishers whose practices match those of predatory publishers have been added to the list as well. The criteria for determining predatory publishers are [here](#). We hope that tenure and promotion committees can also decide for themselves how importantly or not to rate articles published in these journals in the context of their own institutional standards and/or geocultural locus. We emphasize that journal publishers and journals change in their business and editorial practices over time. This list is kept up-to-date to the best extent possible but may not reflect sudden, unreported, or unknown enhancements
